

# Orchisauvage

THE collaborative site for sharing  
Orchid observations in France.

## The Fédération France Orchidées

The objective of the FFO is to share information in order to develop a better understanding of orchids as well as to work for their conservation in their environment.

It publishes books, atlases, a magazine (*L'Orchidophile*) and actively contributes to the updating of the national red list of endangered orchids and their protection.

It brings together amateurs and specialists and is internationally-known, particularly among French-speaking countries.

Written and designed by : G. Constans – C. Villa – F. Peyrissat – J. Bry

## Who can take part and how to support Orchisauvage?

The site is open to anyone who observes orchids in their natural environment and wishes to share their discoveries with other enthusiasts thus developing knowledge about these native plants.

To participate, you only need to sign in! It's free!

## Orchisauvage operates thanks to volunteers and the support of the FFO.

You can help too by sharing your observations, by online donations or by joining the FFO.

# Orchids

discovering and preserving a heritage

Welcome to [www.orchisauvage.fr](http://www.orchisauvage.fr)

# What is Orchisauvage?

ORCHISAUVAGE is a collaborative site for collecting and sharing observations of orchids from mainland France. It is developed by the BioloVision company with the support of the Fédération France Orchidées (FFO).

Its main objectives are the sharing of information for increased understanding (including for research) and conservation, while preserving the security of the species and their habitats.

## Enter your data on the site

- ✓ Friendly environment
- ✓ Sharing
- ✓ Instant display

To participate, sign up at:

Let us guide you through in just a few clicks...

The FFO cartographers and validation experts can answer your questions and help you identify the plants you have observed.

Your observations are always available.

You can make full use of your observations at any time (map display, spreadsheet or GoogleEarth® export).

You keep full control of your data and can modify them any time you want or hide sensitive information.

Benefit from other data.

Browse through the distribution maps, the photo gallery, altitude and flowering evolution charts and view all the observations in real time.
